Projet d'implantation du terminal
méthanier Énergie Cacouna

Cacouna

6211-04-005

Dear Sir

I am writing to you because I am totally against this "LNG" terminal at Gros-Cacouna on the St. Lawrence River.

If there is a need to liquify natural Gas, let it be done where ever the gas is brought out of the ground.

I did call and write to your department more than once, I was told the gas would come from the North, even from Russia.

In that case, they have plenty room in Asia to work on liquifying the gas or ship it into the Mediterranean Sea.

We cannot afford to mess up the St. Lawrence River anymore. It is long past the time to give the river respect it is due. It has been used and over used for 400 years. The river is the life blood of Canada. Please no more development along its shores.

Yours Truly
Ms R. L. Ramsay
