Référence:

10. Le marché de l'énergie

Demande ou Question:

- 10.2 Comment est-il prévu d'accroître la sécurité énergétique lorsque le marché sera intégré ?

Réponse:

The integration of LNG as a new source of natural gas supply to the Quebec marketplace reduces the province's reliance on North American gas production and provides both physical and economic energy security. Integrating LNG into the Quebec market provides supply security in the event that there is an interruption of supply from traditional sources due to problems with pipeline, storage or production facilities. During periods of high demand, the availability of LNG in Quebec will reduce the level of competition Quebec faces from other markets in North America for limited quantities of both pipeline capacity and natural gas supply which will in turn reduce price volatility and uncertainty.
