
BAPE-17.2

Référence:

17. Le transport maritime

Demande ou Question:

17.2 Veuillez justifier l'évaluation qui stipule que la présence des remorqueurs réduira la possibilité d'impact à 50 %.

Réponse:

The 50% factor is judged to be a conservative risk discount number. It is based on analysis of operations in the Oslo Harbour where it was determined that the presence of the tugs reduced the risk of incidents by 50%. The Oslo Harbor has an opera house exposed to frequent ship traffic in immediate proximity in contrast to the Cacouna terminal which faces far fewer challenges as passing ship traffic is normally more than 10 km away giving ample time to carry out emergency preparedness actions such as tug intervention.
