
BAPE-17.6

Référence:

17. Le transport maritime

Demande ou Question:

17.6 Quelle sera l'année de construction des méthaniers ?

Réponse:

While the terminal is designed to receive a wide range of LNG carriers, it is intended that specific LNG carriers will be chartered for long-term use on the project. The LNG carriers specifically dedicated to the project would likely be constructed in the years from 2007 to 2009.

The terminal will also accommodate LNG carriers carrying spot LNG cargoes. The years of construction of these LNG carriers would vary and hence are not known at this time.
