
BAPE-11.5

Référence:

11. La construction

Demande ou Question:

11.5 Le promoteur a présenté les activités de préparation du chantier et de construction comme deux étapes consécutives de son projet. Peut-il confirmer qu'il n'y aura aucune superposition de ces deux étapes dans le temps ?

Réponse:

Table 5.2.2. of the Environmental Impact Study illustrates the key stages of construction activity by listing them sequentially. In practice, each stage will transition to the next stage, as one work activity completes, and the next one begins.

There will be overlap between work stage activities; however, careful scheduling during detailed engineering design will ensure that such work activity transitions between construction stages occur in an efficient manner.
