Objet: [POLLURIEL (Bayes)] Uranium in drinking water

To the Uranium Mining Commission:

There is growing concern about the toxic effects of uranium in drinking water. Evidence from laboratory animals and humans justify a complete re-evaluation of uranium exposure levels which are likely to increase if mining is initiated. Current data does not provide a clear no-effect concentration particularly for vulnerable groups such as children and adults with chronic diseases. Under the precautionary principle the Quebec Government needs to insure that it first does no harm.

Yours

Jonathan Down
