

Uranium Consultants

From the Education Committee

November 6, 2014

On behalf of the Education Committee, I am writing this letter in denial of the Uranium mining. All of the members including I, have denied the process of preparation of the mining. We believe it will effect the education of the students of our school culturally. We depend on the land as our culture has for centuries. Also, we use the land to teach our culture during school to the students. It is very beneficial to the community and the school and we believe that it will be around longer than the resources extracted for profits. Thank you for this opportunity of having a decision on this subject.

McCombie Annanack
Education Committee President.
