

BAPE Submission from Reggie Bearskin

July 16, 2014

Our territory has already suffered a great deal of damage and contamination. Our rivers have been polluted with mercury, and our fish as well. This was an impact Hydro never predicted. Scientists can't predict all the impacts from resource development. As a result of the hydro developments, people have stopped eating fish from the reservoir. There are three rivers that now flow past our community, and we don't want more contamination that could come from mining and uranium development. We don't want something new to worry about.

BAPE Submission from Violet Cox

July 16, 2014

I oppose uranium development and my message to the BAPE is: Leave it in the ground. I hope they will make the right recommendation to the government of Quebec.
