Att'n: Renee Poliquin

To whom it may concern:

I would like to express my strong opposition to the proposed Technical Landfill Site scheduled for Danford Lake Qc.

I have been living and raising my family in Danford Lake for the past 16 years having been lured here from the city by its beauty and serenity. The proposed Landfill is projected to be developed in a pristine area, lush with free flowing waterways. The Highways 301 & 105 are substandard & poorly maintained also the truck traffic is already too heavy for these highways, I know this for a fact as I not only live on one of these highways but I travel these highways daily on my commute to work in Ottawa. Developing a TLS in Danford Lake would also bring along birds and rodents that we do not have here at this time.

In closing I would like to say that I am an elected member of council in the Municipality of Alleyn & Cawood (Danford Lake) and have sat through many frustrating meetings in the past 2 years. When the Mayor was asked questions pertaining to the TLS by our ratepayers they never received a straight answer instead they were always told that the BAPE Hearings was where their questions would be answered and also that this would be the appropriate place to request a Referendum.

When the public asked for the resolution allowing the environmental studies to be done be rescinded they were told by the Mayor that doing this would put the Municipality in a lawsuit position by the Promoter (this was false information as we found out later from our lawyer). Also, full council was asked to sign a letter confirming that there had been no financial incentives offered to them or their immediate families by the promoter.....only 2 councilors signed. This could have been an

opportunity for council to show good faith instead they basically said that that information was no one's business.

Please strongly consider the wish of the people when you are deciding if this project proceeds or not.

Sincerely,  
Charlene Scharf
