

Danford Lake

1st June 2007

Dear Commission secretariat coordinator
My name is Pearl Presley I'm 82
years old and I've lived my entire
life in Danford Lake.

I'm interested in this project
because I don't feel that a large
engineered land fill would be beneficial
to the Danford Lake area, because it
would be detrimental to the environment.

Some residents are for the dump
while others are against having such
a large landfill in the area and this
has caused a lot of distrust in
the village.

Modifying the land fill will
still create the potential for leakage
into the water systems which could
affect drinking water in the future

I don't think that authorisation
should be granted for this project
as other forms of garbage disposal
have never been considered for Danford
Lake

2

I think that plasma gasification would be a much safer form of garbage disposal as it only occupies 4 acres of land and the emissions from plasma gasification are well within the standards set by the government of Canada.

The slag can be put into the construction of roads so that no part of the gasification process goes into a landfill.

Pearl Presley
