Dear Ms Poliquin,

My family and I are writing to you to express our great concern about the proposed Danford Lake Landfill Project. We are property owners in Kazabazua township, two kilometres from Danford Lake village. We have attended most of the meetings on this topic in the last 2 years.

Here are a few of our concerns:

- 1.our main concern is for the environment. No matter how strong the liner is or how many layers, eventually all liners will leek. The beautiful Picanoc River is within a few km. of the landfill site, this flows into the Gatineau, on to the Ottawa and the St. Lawrence. The Gatineau River has had only a few years to recover from the 100 years or more of floating logs for the logging industry.
- 2.We have been told that approximately 60 garbage trucks a day will drive on highways 148,105 and 301 to the site and then return making at least 120 trucks a day added to the many , many lumber trucks already pounding the roads . These narrow highways have been very badly maintained up until now, making driving them uncomfortable and dangerous. The sides have eroded and are breaking up each day. The beauty and tranquility of this beautiful cottage and tourist area will be ruined with truck noise, blowing debris and road damage.
- 3.We are concerned that the property values of our summer homes will go down. We have much invested in our land and dwelling, we take good care of it, we pay high taxes and pay for the education of the local children and feel we should expect a good return on our investment for our children and grandchildren.
- 4.We are also concerned about the whole landfill technology. It is an outdated one and will put stress on the environment, bring vermin, gulls( who will spend the night on our lakes) and bears.

We as a society must find alternative methods of dealing with our garbage. We are all in his together, let's put our minds and imaginations to work with reseach and good will to solve this huge problem.

Please express my family's views in your report. Thankyou for this opportunity to express it.
