

KSE Windfarm Project @ St. Cyprien-de-Napierville

My name is Jeff Morris, I am a resident of Kahnawake, a nearby community. I am writing this to show my interest and support of the KSE Wind-farm Project in St. Cyprien-de-Napierville.

The reason for my support and interest is simple: renewable energy.

It is important to note the significance of clean energy in today's world, energy that is not only clean but renewable. Environmental studies already released have shown the impact on the surrounding communities to be minimal. Feasibility studies have also shown there is more than enough wind in the area to support this project. As a result of this, I see no reason not to have a source of clean, renewable energy that provides income to the community of St. Cyprien, the community of Kahnawake, and to the landowners where these windmills are to be placed. The architectural beauty I think is a pleasant bonus, as is the fact that these all come at no cost, as the windmills pay for themselves.

I have worked in the tar sands of northern Alberta, it is by comparison, the dirtiest and most harmful source of energy on this side of the world. The only way to move away from this is to promote clean and renewable energy that is not harmful. I believe this wind project is exactly that.

Cordially,

Jeff Morris
